The development team behind the ROSA GNU/Linux operating system announced today the release and immediate availability for download of the KDE and KDE Plasma flavors of ROSA Desktop Fresh R9.

ROSA Desktop Fresh R9 is the first release in more than two years to rebase the RPM-based operating system derived from Mandriva to a newer 2016.1 platform. It comes with both the KDE 4 and KDE Plasma 5 desktop environments, while the GNOME 3, MATE, and LXQt variants should be out in the coming months.
