If you're using containers in production, you know you need a DevOps tool to manage them. For many companies, Kubernetes is that program. The fast-developing, open-source, container-orchestration package has just released its newest version, Kubernetes 1.7, just over three months since the developers released Kubernetes 1.6.

Haven't heard of Kubernetes? You will. Natasha Woods, a Linux Foundation senior PR manager, asked, "What do Wink, Ancestry.com, Box, Buffer, GolfNow, and Ticketmaster have in common? The way they run their infrastructure. Taking a page from giants like Google, these companies are tapping into container orchestration technology Kubernetes."
