Arch Linux Kicks Off 2018 with First Snapshot Powered by Linux Kernel 4.14 LTS [3]

Arch Linux devs don't have time to rest either, so they're kicking off the new year with the first ISO snapshot for 2018, bringing up-to-date components and latest security fixes.

Arch Linux 2018.01.01 ISO snapshot is here, and it's the first to use the latest Linux 4.14 LTS kernel. While December's Arch Linux ISO snapshot was still powered by a kernel from the now deprecated Linux 4.13 series, January 2018's release is using Linux kernel 4.14.9 for all new installs, while the recently released Linux kernel 4.14.10 is still in testing.

Arch monthly December [4]

Arch Linux Trusted Users, Developers and members of the Security team have been at 34C3 and even held a small meetup. There was also an #archlinux.de assembly where people from the irc channel could meet each other. Seeing how much interest there was this year, it might be worth it to host a self organized session or assembly with more stickers \o/
