Watch this space, we said ? well, your patience is soon to be rewarded!

Releasing the Mageia 6 updates for QT5, KF5, Plasma, KDE and LXQt has just been approved. There will be well over 500 packages in total!

To help reduce the chance of users trying to install the updates from a mirror that hasn't been fully updated, the hdlst generation will be held for 24 hours after the updates are pushed from updates testing to the updates repository. This should help ensure that the mirrors are fully synced before the hdlst generation is turned back on, and the updates are actually made available for users to install from the normal updates repository.
