Raspberry Pi Foundation's Raspbian Linux operating system for Raspberry Pi computers received a new stable version with various new features and many improvements.

Coming more than two months after the previous update released on April 18, the Raspbian 2018-06-27 update is now available for Raspberry Pi users to introduce a few enhancements and fix many bugs. The most prominent new feature of this release is the implementation of a new configuration wizard that will be displayed after the first boot.
