Rolling out Sailfish 3 this autumn has been our biggest objective this year and we're happy to report the latest status. It's time for an update and awaited schedule news.

As we mentioned already in our original Sailfish 3 announcement in Mobile World Congress back in February, Sailfish 3 is a result of rigorous development work done together with Jolla's licensing partners and the Sailfish community over the course of 2017-2018 ? thanks to all of you for the cooperation and contributions! The third generation of our operating system will have clear new benefits for all of its users, be it corporate licensing customers, our developer community members, or daily Sailfish users.

Jolla has always embraced the methodology of continuous development and continuous releases, and Sailfish 3 is no exception. Sailfish 3 is rolled out in phases, and in fact, our latest software update Nurmonjoki already included a few of the new features. Albeit perhaps more relevant for the corporate customers, those still have belonged to our Sailfish 3 list all the time. These items included e.g. VPN improvements and MDM (Mobile Device Management) functionalities.
