The Samsung Developer Conference, held this week in San Francisco, brings creators together to discover and learn about the latest technologies in Samsung's portfolio and further afield. One of the technologies showcased, following

the initial demo in 2017, is Samsung's Linux on DeX. Samsung DeX, launched last year, lets users of Samsung flagship Galaxy devices enjoy apps on a bigger screen for a better viewing experience, whether watching films, playing games or just browsing the web.

This year, Samsung is announcing the beta launch of Linux on DeX which extends the value of Samsung DeX to Linux developers. Linux on DeX empowers developers to build apps within a Linux development environment by connecting their Galaxy device to a larger screen for a PC-like experience.
