- [KDE releases a new version of the Plasma desktop environment](#) [2]

Say hello to Plasma 5.15, the newest version of KDE's acclaimed desktop environment.

This February release of KDE Plasma comes with a wide range of new features and improvements. The main focus of developers has been stamping out all minor problems and papercuts of the desktop, aiming to make Plasma smoother and easier to use.

Plasma's configuration interfaces have been redesigned, expanded and clarified to cover more user cases and make it simpler to adapt Plasma to everybody's needs. Plasma has also improved the integration of non-native applications, so Firefox, for example, can now optionally use native KDE open/save dialogs. Likewise, GTK and GNOME apps now respect the global scale factor used by high-DPI screens.

- [KDE Plasma 5.15 Desktop Environment Officially Released, Here's What's New](#) [3]

Six months in development, the KDE Plasma 5.15 desktop environment comes with a lot of changes to make your Plasma experience more enjoyable. These include various refinements to the configuration interfaces, new options for complex network configurations, redesigned icons, improved integration with third-party technologies and apps, and a much-improved Discover package manager.

"For the first production release of 2019, the Plasma team has embraced KDE's Usability & Productivity goal and has been working on hunting down and removing all the papercuts that slow you down," reads today's announcement. "With this in mind, we teamed up with the VDG (Visual Design Group) contributors to get feedback on all the annoying problems in our software, and fixed them to ensure an intuitive and consistent workflow for your daily use."
