- [Microsoft releases new Windows 10 preview with Linux files, gaming improvements, and Timeline for Chrome](#)[3] [Ed: Microsoft Emil helps promote [the lie that Vista 10 is basically "Linux" now](#) [4].]

- [Chrome OS 74 To Bring ?Audio Output? Support For Linux Apps](#)[5]

Pixelbooks, which run on Chrome OS, are compatible with Linux apps owing to Google's Crostini software. However, it is still in beta, and there are many limitations if you are running Linux apps. One of the major limitations is that Linux apps on Chrome OS do not support hardware-accelerated graphics and audio.

- [Chrome Os To Soon Feature Virtual Desktops, Early Concept Demonstrated](#)[6]

?Virtual Desktops? is a term for being able to manage multiple window configurations across virtual desktops which you are unable to see. Imagine you could move your computer screen to an identical invisible screen next to it, and later switch to it whenever you want. For example, You can have Chrome open in one desktop, text edit in another, and Photoshop in the third and you have the ability to switch between them seamlessly and swiftly without having to juggle between windows open on one desktop. A prime example of Virtual Desktops is Mac OS's Mission Control feature.
