This afternoon, a commit was posted to the Android Open Source Project, attempting to fix a labeling issue with Android's SELinux policy. For our purposes, we just need to know that SELinux is a security module for the Linux kernel, which is often fine-tuned on a per-device basis.

- [Google Pixel 4 makes yet another AOSP appearance, Pixel 3a too this time](#) [6]

Last week, we were treated to the first appearance of the Google Pixel 4 inside the Android Open Source Project (or AOSP), which gave us a fairly clear indicator that the device is in-

development and possibly already in some (but not all) Google developers' hands. Today, the Google Pixel 4 has surfaced again in AOSP, this time side-by-side with the continuously-leaked Pixel 3a.
