- [Windows 10 is getting a Microsoft-built Linux kernel](#) [3] [Ed: It's calling swallowing the competition and it's intended to make this competition obsolete. [UEFI](#) [4] already makes it harder to boot, let alone install.]

Microsoft is adding its own open-sourced Linux kernel to Windows 10 to improve performance of Windows Subsystem on Linux.

- [Microsoft Announces Windows Subsystem for Linux 2](#) [5] [Ed: The very fact that longtime Microsoft boosters such as Bogdan Popa celebrate WSL2 should tell us who has the upper hand.]

- [Microsoft Brings a Full Linux Kernel to Windows 10](#) [6] [Ed: Today, Bogdan Popa wrote not one but several articles about WSL; these are people with a history of GNU/Linux bashing and endless Microsoft loyalty. It's a reason for great caution. The concept of googlebombing and controlling the narrative (perception management) is poorly understood by people. Microsoft does this with bloggers to quell/silence competing views, making them seem 'marginal'.]

- [Canonical announces support for Ubuntu on Windows Subsystem for Linux 2](#) [7] [Ed: Dear Canonical. Stop sucking up so hard to Microsoft. You're making them blush while [they attack you](#) [8].]

- [Microsoft Unveils Visual Studio Online In Build2019](#) [9] [Ed: Microsoft Visual Studio Online = surveillance while you code. GDPR violation, too. Microsoft Visual Studio = surveillance inside your code (compiled). Proprietary software too. Visual Studio Code = openwashing this surveillance.]
- [Windows Subsystem for Linux 2 \(WSL\): Microsoft #Build2019](#) [10] [Ed: Microsoft tries to blur the difference between Vista 10 and GNU/Linux so that people won't see a reason to change and their confusion alone would discourage an understanding of the reasons.]

The first version of Windows Subsystem for Linux (WSL) in 2016. It has been said that the new subsystem will be based on Linux 4.19 LTS kernel. WSL 2 will also support running Linux Docker containers natively, so that VMs are no longer required. Windows Terminal and WSL 2 are both coming in mid-June.
- [The Year Of Linux On The Desktop ? at last! Windows Subsystem for Linux 2 brings the Linux kernel into Windows](#) [11] [Ed: To The Register it is "Year Of Linux On The Desktop" only when Microsoft hijacks it to [discourage people from actually running](#) [12] it (except as an 'app' in Windows, from the Microsoft "Store")]
- [Windows 10 To Soon Ship With Full Linux Kernel](#) [13] [Ed: I am still seeing no announcement about Windows going all GPL and shipping in full with GNU/Linux systems. It's a one-way relationship.]

[Linux Microsoft](#)
