- [Six more devices from ThinkPenguin, Inc. now FSF-certified to Respect Your Freedom](#) [3]

This is ThinkPenguin's second batch of devices to receive RYF certification this spring. The FSF announced certification of seven other devices from ThinkPenguin on March 21st. This latest collection of devices makes ThinkPenguin the retailer with the largest catalog of RYF-certified devices.

"It's unfortunate that so many of even the simplest devices out there have surprise proprietary software requirements. RYF is an antidote for that. It connects ethical shoppers concerned about their freedom with companies offering options respecting that freedom," said the FSF's executive director, John Sullivan.

Today's certifications expands the availability of RYF-certified peripheral devices. The Penguin USB 2.0 External USB Stereo Sound Adapter and the 5.1 Channels 24-bit 96KHz PCI Express Audio Sound Card help users get the most of their computers in terms of sound quality. For wireless connectivity, ThinkPenguin offers the Wireless N PCI Express Dual-Band Mini Half-Height Card and Penguin Wireless N Mini PCIe Card. For users with an older printer, the USB to Parallel Printer Cable can let them continue to use it with their more current hardware. Finally, the PCIe eSATA / SATA 6Gbps Controller Card help users to connect to external eSATA devices as well as internal SATA.

[4]

Purism, the social purpose corporation which designs and produces popular secure hardware, software, and services, has seen its Librem One suite of privacy protecting apps and services surpass its initial crowdfunding goal of 5,000 backers in just two weeks.

Librem One is growing in popularity as users grow distrustful of how large tech companies are using their personal information.
