- [This Week Twitter Taught Me: Thunderbird is Go, But Windows Text Editors are Not!](#) [2]

Although it's proving difficult to stay on (Linux related) topic, this series has proven a great success in only 3 weeks ? so much so that I'm planning to launch three separate spin-offs!

I mean, I might as well milk the franchise for all I can while the udders drip with goodwill, right?

Keep an eye out for ?This Week My Spam Folder Taught Me?, ?This Fortnight a Disqus Bot Taught Me? (spoiler: bit repetitive that one) and, to serve the overlooked people-who-read-this-site-while-diving niche, ?This Month Diving Taught Me?.

I wouldn't get your hopes up for the latter, though. I can't swim, let alone dive?

- [Timetable Scheduler App For Linux](#) [3]

Timetable is a scheduling app available on flathub repositories. The app is maintained by the Elementary OS team and thus it's User Interface looks like its own native OS. Might look a bit out of place on GNOME, KDE, Cinnamon, etc but still yet the app works like a charm. Read on below to get more done with Timetable.

- [Juan Luis Baptiste : New docker images for upcoming mageia 7](#) [4]

I have added new docker images for the upcoming mageia 7 release. Thanks to the latest work

on our image build tools, the images are available in all architectures mageia 7 supports:  
x86\_64  
armv7hl  
aarch64

[Manas and Marek: Improving Fedora release process](#) [5]

Manas Mangaonkar (pac23) is working on the Change Management Tool, a tool for the Fedora Program Managers and contributors to propose, edit, and approve changes per Fedora's change process. He was selected for Google Summer of Code 2019.

We asked Manas a few questions as he prepares for his next three months working with Ben Cotton, his mentor for the summer.

[Candy Tsai: Outreachy 2019 March-August Internship ? The Application Process](#) [6]

Really excited to be accepted for the project ?Debian Continuous Integration: user experience improvements? (referred to as debci in this post) of the 2019 March-August round of the Outreachy internship! A huge thanks to my company and my manager Frank for letting me do this since I mentioned it out of the blue. Thanks to the Women Techmakers community for letting me know this program exists.

[Sony's Deal With Microsoft Blindsided Its Own PlayStation Team](#) [8] [iophk: "RIP Playstation"]

Last week, the companies announced a strategic partnership to co-develop game streaming technology and host some of PlayStation's online services on the Redmond-based company's Azure cloud platform. It comes after PlayStation spent seven years developing its own cloud gaming offering, with limited success.

Negotiations with Microsoft began last year and were handled directly by Sony's senior management in Tokyo, largely without the involvement of the PlayStation unit, according to people familiar with the matter. Staff at the gaming division were caught off-guard by the news. Managers had to calm workers and assure them that plans for the company's next-generation console weren't affected, said the people, asking not to be identified discussing private matters.
