On May 14th, 2019, Intel published details about four new security vulnerabilities discovered by various security researchers, which are affecting several of its Intel microprocessor families. Intel released updated microcode firmware to mitigate them, and they landed on the same day for all supported Ubuntu Linux operating system series.

Now, Canonical has released an updated intel-microcode firmware that addresses these new security vulnerabilities on systems running Intel Cherry Trail and Intel Bay Trail processors. The updated intel-microcode packages are now available in the official software repositories of Ubuntu 19.04, Ubuntu 18.10, Ubuntu 18.04 LTS, Ubuntu 16.04 LTS, and Ubuntu 14.04 ESM.
