Users can access the Snap store on Linux with the help of the Snap runtime. The runtime doesn't come pre-configured on any Linux distribution except for Ubuntu. So, if you want to install any of the applications we cover in this list, do yourself a favor and install the Snap package system on your Linux PC.

Installing the Snap runtime is pretty straightforward. Open up the package manager on your Linux PC, install the `?snapd?` package and enable it to get going with it. Or, if you need help check out our tutorial on how to set up Snap

packages on Linux!

Can't install the Snap runtime on your Linux PC? Consider switching over to Ubuntu Linux instead. It's an excellent OS, and it comes with Snaps enabled out of the box!
