- [At least one Vim trick you might not know](#) [2]

This article is about some of the little tricks that I use in Vim. None of them are deep dives, and I encourage you to learn more about whatever's interesting. They also aren't connected to each other. But that's fine. In total, they're more than enough to help a lot.

- [Install GCC on Ubuntu](#) [3]

- [Set Screen Resolution using Kernel Boot Parameter on Linux](#) [4]

- [Setting Up Node.js Development Environment](#) [5]

- [Ubuntu Disable IPv6](#) [6]

- [How to Install Git on Ubuntu](#) [7]

-

[How to Install LEMP \(Linux, Nginx, MariaDB, PHP\) on Fedora 30 Server](#) [8]

- [get a rough estimate about how much disk space is used by all the currently installed debian packages](#) [9]

[HowTos](#)
