An Accounting Software is an complex application that enables businesses of any size to manage data especially financial data and ensure that all resources end up in the right place.

Any such software that is good has the ability to gather, analyze, summarize, and report financial data and some even go an extra mile to automate certain tasks, implement contingency strategies, and allow for custom functions.

Here is a list of the best accounting software for Linux platforms that are not only open source but also free or low-cost.
