- [AT&T, Nokia open up the radio's edge to third party apps](#) [2] [Ed: Openwashing to dominate the standards and interfaces (with patents) through the "Linux" Foundation]

AT&T and Nokia have developed a radio edge cloud (REC) appliance that the two companies plan to release into open source via the Linux Foundation. The REC will make it possible for third parties to develop apps and get access to the radio access network (RAN).

[...]

Murphy said that it is not easy to predict all the use cases for REC but added that having an open source edge cloud with open interfaces to the RAN control will allow operators to have more options.

- [Accord Project to develop open source framework for smart legal contracts](#) [3] [Ed: They're promoting and spreading proprietary software and proprietary formats of Microsoft]

One of the main purposes of Accord Project is, therefore, to provide a vendor-neutral ?.doc? format for smart legal agreements.

- [Apple joins the open-source Cloud Native Computing Foundation](#) [4]

Apple, in typical fashion, isn't commenting on the announcement, but the CNCF notes that

end-user memberships are meant for organizations that are 'heavy users of open source cloud native technologies' and that are looking to give back to the community. By becoming a CNCF end-user member, companies also join the Linux Foundation .

- [Linux stable tree mirror at github](#) [5] [Ed: Greg Kroah-Hartman giving Microsoft more control over Linux]

It differs from Linus's tree at: <https://github.com/torvalds/linux> in that it contains all of the different stable tree branches and stable releases and tags, which many devices end up building on top of.

So, mirror away!

Also note, this is a read-only mirror, any pull requests created on it will be gleefully ignored, just like happens on Linus's github mirror.

If people think this is needed on any other git hosting site, just let me know and I will be glad to push to other places as well.
