- [A Quick Look At The Debian 10.0 Buster vs. Debian 9.9 Performance](#) [2]

With Debian 10 "Buster" due to be releasing in early July, I've begun testing the near-final Buster images on various systems. Here is a look at a common Intel Core i7 system comparing the current performance of Debian 10.0 to the current stable 9.9 release.

On the Core i7 8700K system, Debian 9.9 vs. 10.0 were benchmarked with the same hardware under test and each Debian release being cleanly installed and kept to its default settings.

- [Freexian's report about Debian Long Term Support, May 2019](#) [3]

Like each month, here comes a report about the work of paid contributors to Debian LTS.

- [Virtual Labs presentation at the HubLinked meeting in Dublin](#) [4]

We have participated to the HubLinked workshop in Dublin this week, where I delivered a presentation on some of our efforts on Virtual Labs, in the hope that this could be useful to the partners designing the "Global Labs" where students will experiment together for Software Engineering projects.
