- [SUSE Linux Enterprise 12 Service Pack 5 Beta 1](#) [2]

- [A demo based introduction to SUSE Cloud Application Platform](#) [3]

At the recent SUSECON conference in Nashville, Peter Andersson and Peter Lunderbye from SUSE demonstrated SUSE Cloud Application Platform, including pushing your first app, buildpacks: what are they and how they can be utilised, scaling and how easy the platform makes it, and how to improve resiliency and availability of your app.

SUSE has posted all recorded talks from SUSECON on YouTube. Check them out if you want to learn more about what SUSE has to offer. We're not just Linux anymore! I'll be posting more SUSE Cloud Application Platform talks here over the coming days.

- [Enabling Discoveries with AI and HPC \(and the Rise of Helium\)](#) [4]

This week I am attending the International Supercomputing conference in Frankfurt, and I am in awe of the scientists and researchers that are here and their ability to dig in and understand super complex problems in very specialized areas. While I am humbled by the world-changing work represented at a conference like this, I am also honored to be playing a small part in their success. With the next iteration of SUSE Linux Enterprise High Performance Computing 15 SP1, we've expanded and refreshed our bundle of popular HPC tools and libraries that we make available along with every subscription to our SLE HPC operating system.
