On behalf of the oVirt community, its contributors and Red Hat, we welcome Oracle to the oVirt community. oVirt is the open source component that enables management of the Linux Kernel Virtual Machine (KVM), the hypervisor for virtualized environments running on the Linux kernel.

At Red Hat, we believe that upstream collaboration drives innovation, even among competitors. To this end, Red Hat has a 10+ year tenure of thought leadership, contributions and collaboration in the oVirt and KVM communities. Our development and release processes are designed to ensure that Red Hat contributions to these communities are pushed upstream so the benefits gained from our efforts are available to the community at large and available for any and all to draw from.
