- [Microsoft & Pentagon are quietly hijacking US elections \(by Lee Camp\)](#) [2]

Good news, folks! We have found the answer to the American rigged and rotten election system.

The most trustworthy of corporations recently announced it is going to selflessly and patriotically secure our elections. It's a small company run by vegans and powered by love. It goes by the name "Microsoft." (You're forgiven for never having heard of it.)

The recent headlines were grandiose and thrilling:

"Microsoft offers software tools to secure elections."

"Microsoft aims to modernize and secure voting with ElectionGuard."

Could anything be safer than software christened "ElectionGuard"?! It has "guard" right there in the name. It's as strong and trustworthy as the little-known Crotch Guard? an actual oil meant to be sprayed on one's junk. I'm unclear as to why one sprays it on one's junk, but perhaps it's to secure your erections? (Because they've been micro-soft?)

- [Netflix Researchers Just Fixed 4 Severe Linux And FreeBSD Vulnerabilities](#) [3]

- [Netflix Uncovers TCP Bugs Within The Linux & FreeBSD Kernels](#) [4]

As Netflix's first security bulletin for 2019, they warned of TCP-based remote denial of

service vulnerabilities affecting both Linux and FreeBSD. These vulnerabilities are rated "critical" but already being corrected within the latest Git code.
