If you're a fan of the Arc menu extension for GNOME Shell you may be interested to hear that an update is on the way.

A new version of the traditional-style app menu, which is particularly popular with Dash to Panel users, is currently pending approval over the GNOME Extensions website.

What does it bring? Personalisation.

Arc Menu replaces the full-screen app launcher in GNOME Shell with a more traditional 'start menu' design. It's

searchable, has bookmarks for important folders, shortcuts for key system actions, and lets you manage your session.

It also lets you browse installed applications based on their category. The whole of the left-hand sidebar is dedicated to this purpose.
