KDE Plasma 5.16.1 is now available only one week after the release of the KDE Plasma 5.16 desktop environment series, a major version that adds numerous new features and improvements, including a totally revamped notifications system, new look and feel for the login, lock, and logout screens, better Wayland support, as well as numerous other desktop enhancements.

Consisting of a total of 21 bug fixes, the KDE Plasma 5.16.1 maintenance update is here to make the KDE Plasma 5.16 desktop environment more stable and reliable by addressing various issues reported by users lately, including an issue that broke the Sleep/Suspend command, and the ability for the Plasma Discover package manager to show when Flatpak updates are fetched.
