Now that our 2019.2 release is out, we thought we would take this opportunity to cover some of the changes and new features we have coming to Kali Linux in the following year. Normally, we only really announce things when they are ready to go public, but a number of these changes are going to impact users pretty extensively so we wanted to share them early.

As you read through this post, what you will see is that we are really trying to balance our efforts between changes that are user facing and those that are applicable to the backend. The backend changes don't seem as exciting at first, but the fact is that the easier it is for us to work on Kali, the easier it is for us to get to user facing features. Plus, some of these changes are focused on tweaking the development process to make it easier for others to get involved in the project.

We are not ready to announce dates on any of these changes just yet. When they are ready, they will drop.
