The VIA Mobile360 D700 Drive Recorder is a fleet management dashcam system with interior and exterior HD cameras, CANBus telematics monitoring, 4G, and GPS that runs Linux on a dual -A53 Novatek NT96685T.

VIA Technologies has launched a Linux-driven camera and telematics system for fleet management that joins other Mobile360 branded systems such as its Android-based VIA Mobile360 Surround View Sample Kit. While the Surround View system has four cameras, a 7-inch touchscreen, ruggedization features, and optional ADAS, the new VIA Mobile360 D700 Drive Recorder is a smaller, simpler affair with dual cameras and a dashcam form factor. The system enables fleet operators to achieve greater asset efficiency, reduce operational costs, and improve driver safety, says VIA.
