- **Digital experience firm Acquia sees India as a global delivery centre** [4]

    Acquia, a US-based open source digital experience company, has announced the opening of an office in Pune, expanding its presence in the Asia-Pacific region. Taking this next step in its global growth strategy, Acquia looks to bolster its partner network and expand its global customer footprint.

- **EPAM Named An Acquia Global Select Partner, Joining Elite Group Of Partners** [5]

    EPAM Systems, Inc. (EPAM), a leading global provider of digital platform engineering and software development services, today announced that it has achieved Global Select status in Acquia's Partner Program. Acquia, an open source digital experience company, provides software and services built around Drupal. As one of only a few elite Global Select partners, EPAM leverages its Acquia and Drupal expertise to help its clients design, build and deliver engaging and intelligent customer experiences.

[4 great Java-based CMS options](#) [7]

OpenCms has been around since 1999, and it's been an open source Java CMS platform since 2001. Not only is it one of the oldest Java-based CMS platforms, it's one of the oldest CMS tools, predating the popular PHP-based WordPress, which debuted in 2003.

From a developer's perspective, OpenCms is simple to set up and maintain. It runs as a Java servlet, which makes installation easy. It works with most major databases; whether you prefer MySQL, Microsoft SQL Server, MariaDB or another popular database, you can likely run OpenCms without much hassle.

OpenCms probably won't win awards as the most elegant or attractive Java-based CMS. The interface was overhauled in 2019, but OpenCms doesn't exactly feel modern. It works, but it's a little clunky.

However, OpenCms does enjoy the distinction as a truly cost-free open source Java CMS. There is no freemium pricing model for the product, and there are no licensing fees.
