The Mozilla Firefox 68 open-source and cross-platform web browser is now available to download for GNU/Linux, Mac, and Windows platforms ahead of tomorrow's official release.

Scheduled to be released on July 9th, 2019, the Firefox 68 web browser can be downloaded and installed right now from Mozilla's official download servers. So if you can't wait until tomorrow's official release, you can go ahead and download Firefox 68 for GNU/Linux, macOS, and Windows operating systems.

Mozilla Firefox 68 isn't an impress release as it only brings some minor improvements and not so exciting features. For example, it introduces a new reporting feature in about:addons to make it easier for users to report security and performance issues for add-ons and themes.

It also adds support for accessing the Firefox Account settings directly from the hamburger menu, implements a full page color contrast audit capable of identifying all the elements on a web page that fail the color contrast checks, and brings WebRender support for Windows 10 users with AMD graphics cards.
