KDE Plasma 5.16.3 comes two weeks after the KDE Plasma 5.16.2 update with more than 30 changes across various core components and apps, including Plasma Workspace, Plasma Desktop, Plasma Audio Volume Control, Plasma Networkmanager (plasma-nm), KWin, Plasma Discover, DrKonqi, KWayland-integration, plasma-browser-integration, plasma-integration, and kde-cli-tools.

"Today KDE releases a bugfix update to KDE Plasma 5, versioned 5.16.3. Plasma 5.16 was released in June with many feature refinements and new modules to complete the desktop experience. This release adds a fortnight's worth of new translations and fixes from KDE's contributors. The bugfixes are typically small but important," reads the release announcement.
