Launched on April 18th, 2019, the KDE Applications 19.04 open-source software suite series received a total of three maintenance updates, the last one being released today as KDE Applications 19.04.3, which fixes some remaining issues but also marks the end of life of KDE Applications 19.04.

KDE Applications 19.04.3 brings numerous changes across various of the included applications, but the most important changes are the fact that the Konqueror and Kontact apps no longer crash on exit when QtWebEngine 5.13 is used and the Python importer in the Umbrello UML app now supports parameters with default arguments.
