The Government Digital Service (GDS) is part of the UK Cabinet Office [1]. It leads the digital transformation of Government in the UK, helping people interact with government more easily and supporting government to operate more effectively and efficiently.

In July 2014, the UK Cabinet Office announced the selection of the Open Document Format (ODF) for sharing and viewing government documents.

The Open Standards Team within GDS support and encourage the use of open standards in government. Their aim is to help identify and contribute to open standards for software interoperability and to promote data formats that will help to meet user needs across the UK government and support the delivery of common components.

GDS has been a long-term supporter of the adoption of Open Document Format, and their participation in the TDF Advisory Board represents a strong endorsement of the project's commitment to the advancement of open standards and ODF, says Simon Phipps, TDF Director.
