In this article, we're spotlighting 20 applications that are functionally identical (or at least pretty similar) between Windows and Linux.

While there aren't absolute brand-for-brand equivalents for about 30 percent of the applications, there are workable substitute solutions.

In the following slides, I'll show you the applications that are either exact matches across platforms, or which work as solid substitute solutions when jumping between platforms and still needing to get the job done.
