LibreOffice's Export as PDF has improved. It now fully supports PDF/A-2 document format. This is required by several organizations for long-term file storage. It also simplified its editable PDF forms by incorporating the Form menu into LibreOffice Writer.

A new feature, which security-minded businesses may find interesting, is that you can now "redact" information in documents. With this, you can remove or hide sensitive information such as personal data before exporting or sharing the file.

You can run LibreOffice on Linux, MacOS, and Windows. You can also use as a cloud Software-as-a-Service (SaaS) application, LibreOffice Online, by deploying it on a cloud you control.
