Ahoy! openSUSE Xfce team is pleased to announce that the long awaited Xfce 4.14 has been released for Tumbleweed.

After a long development cycle (4 years!), all of the core components and applications have been ported to GTK 3.

Among the main new features and improvements, the xfwm4 window manager has finally gained support for VSync, HiDPI, hardware GLX and various compositor improvements.

You can check out the neat new features in the official Xfce 4.14 tour and the official release announcement.
