Sounds like déjà vu? Right, I posted a post with an almost identical title 18 months ago or so. This is about Tuhi 0.2, new and remodeled and completely different to that. Sort-of.

Tuhi is an application that supports the Wacom SmartPad devices - Bamboo Spark, Bamboo Slate, Bamboo Folio and Intuos Pro. The Bamboo range are digital notepads. They come with a real pen, you draw normally on the pad and use Bluetooth LE and Wacom's Inkspace application later to sync the files to disk. The Intuos Pro is the same but it's

designed as a "normal" tablet with the paper mode available as well.

18 months ago, Benjamin Tissoires and I wrote Tuhi as a Dbus session daemon. Tuhi would download the drawings from the file and make them available as JSON files over Dbus to be converted to SVG or some other format by ... "clients". We wrote a simple commandline tool to debug Tuhi but no GUI, largely in the hope that maybe someone would be interested in doing that. Fast forward to now and that hasn't happened but I had some spare cycles over the last weeks so I present to you: Tuhi 0.2, now with a GTK GUI...
