- [Highlights of YaST Development Sprint 83](#) [2]

The summer is almost gone but, looking back, it has been pretty productive from the YaST perspective. We have fixed a lot of bugs, introduced quite interesting features to the storage layer and the network module refactoring continues to progress (more or less) as planned.

So it is time for another sprint report. During the last two weeks, we have been basically busy squashing bugs and trying to get the network module as feature-complete as possible. But, after all, we have had also some time to improve our infrastructure and organize for the future.

- [openSUSE Tumbleweed ? Review of the weeks 2019/34 & 35](#) [3]

The last two weeks have been average weeks when it comes to the number of snapshots and updates. We have released a total of 6 snapshots. From a user point of view, I think this is actually a pretty good pace. The 6 snapshots were 0815, 0820, 0822, 0823, 0824 and 0828.
