The versatile single-board computer from the UK, the Raspberry Pi, is a firm favorite among makers and tinkerers and Linux hackers the world over. It's small, it's light, it's easy to use and set up, and with the launch of the new Model B version 4, it's really quite powerful.

But almost as interesting as the board itself are the kinds of peripheral gizmos you can attach to the main board. Most of these are third-party hats and other add-ons, but one of the most popular ones is the official Raspberry Pi camera.
