Linux package management has come a long way from the nightmare it used to be. Still, the package managers provided by distributions aren't always perfect. The Snap and Flatpak formats have made it much easier to install software no matter what distro you're running.

Both Snap and Flatpak files are often available on a given app's website, but both of these formats have their own centralized marketplaces. Which one is right for you? It's not an easy question to answer.
