- **Fedora Community Blog: GSoC summer 2019: Fedora Gooey Karma** [2]

    The day GSoC projects list was published I started sorting out all the organizations that I?d enjoy working with. Being a Linux user/enthusiast I filtered down to a bunch of Linux distros and desktop managers. Sorting out all the projects, Fedora-Gooey-Karma seemed to be a project that suited the skills I have.

    Once I was sure that Fedora Gooey Karma is a project that I would love to work on during the summer, I mailed @sumantro about the project. We talked about the project on mails.

- **Fedora Community Blog: FPgM report: 2019-37** [3]

    Here?s your report of what has happened in Fedora Program Management this week. Fedora 31 Beta is go!

    I have weekly office hours in #fedora-meeting-1. Drop by if you have any questions or comments about the schedule, Changes, elections, or anything else.

- **PHP version 7.2.23RC1 and 7.3.10RC1** [4]

    Release Candidate versions are available in testing repository for Fedora and Enterprise Linux (RHEL / CentOS) to allow more people to test them. They are available as Software Collections, for a parallel installation, perfect solution for such tests (for x86_64 only), and also as base packages.

RPM of PHP version 7.3.10RC1 are available as SCL in remi-test repository and as base packages in the remi-test repository for Fedora 30-31 or remi-php73-test repository for Fedora 29 and Enterprise Linux.

RPM of PHP version 7.2.23RC1 are available as SCL in remi-test repository and as base packages in the remi-test repository for Fedora 29 or remi-php72-test repository for Enterprise Linux.

- **Karsten Hopp: Onboarding Fedora Infrastructure** [5]

  I'm using / working on Fedora since FC-1 and just recently joined the Infrastructure team.

- **Fedora Community Blog: Fedora 31 Gnome Test Day 2019-09-18** [6]

  Wednesday, 2019-09-18 is the Fedora 31 Gnome Test Day! As part of changes Gnome 3.34 in Fedora 31, we need your help to test if everything runs smoothly!

- **EPEL Bug: Bash errors on recent EL-8 systems.** [7]

  Last week, I got asked about a problem with using EPEL-8 on Oracle Enterprise Linux 8 where trying to install packages failed due to bad license file. I duplicated the problem on RHEL-8 which had not happened before some recent updates.
