Manjaro Linux's in-house system tools, easy installation application and better range of software packages make it a better Arch-based distro than Arch Linux itself. Manjaro offers much more than a pure Arch Linux environment.

Regardless of which desktop style you select, the welcome screen introduces Manjaro tools and get-acquainted details such as documentation, support tips, and links to the project site.

You can get a full experience in using the live session ISOs without making any changes to the computer's hard drive. That is another advantage to running Manjaro Linux over a true Arch distro. Arch distros usually do not provide live session environments. Most that do lack any automatic installation launcher from within the live session.
