Fedora, as a Linux distribution, will celebrate the 15th anniversary of its first release in November, though its technical lineage is much older, as Fedora Core 1 was created following the discontinuation of Red Hat Linux 9 in favor of Red Hat Enterprise Linux (RHEL).

That was a turbulent time in Red Hat history, and Fedora has had its own share of turbulence as well. Since becoming project leader in June 2014, Matthew Miller had led the Fedora.next initiative, intended to guide the second decade of the Fedora project. That initiative resulted in the creation of separate Fedora Workstation, Server, and Cloud editions, the latter of which has since been replaced with CoreOS, as well as the addition of an Internet of Things (IoT) edition.
