If you haven't been paying attention to a little Linux desktop distribution called Deepin, it's time to put it on your radar. Nevermind that Huawei chose Deepin to ship on their MateBook laptop lineup. Nevermind that Deepin Cloud Sync is a killer, forward-thinking feature that every Linux distro needs to adopt. Nevermind that its elegant slide-out control center resembles something sexy and sensible straight out of the future. But looking toward 2020, Deepin is poised to be absolutely stunning.

This is without question the most beautiful environment I've ever laid eyes on. I've gone from admiring it as an elevated Desktop Linux distribution to downright salivating over it.
