With the rise in IoT use, we are witnessing a demand for ready-made operating systems to support smart device development. Currently, the race is between proprietary versions such as IoT Plug and Play by Microsoft and open source operating systems.

One such emerging open source player is Fedora which has a workstation that supports virtualization and containers. Fedora is also slated to release an Internet of Things edition called ?Fedora IoT? in future.

Here is a review of the open source product?s support capabilities for IoT and relevant installation details.
