GIMP 2.10.14 comes with a new Show All view mode that allows showing pixels outside the canvas boundary. You can mark the canvas boundary with a new Show Canvas Boundary option that renders a dotted line around it. There's also a new Keep Padding option in the new Show All view mode, to preserve the padding color instead of displaying the checkerboard.

Also, several features were updated to work with this new Show All mode, including color-picking, canvas grid, transform tools, bucket fill, and more.
