Sailfish OS 3.2.0 Torronsuo is a substantial release introducing updated hardware adaptation support, which enables us to bring Sailfish X to newer generation devices like the Sony Xperia 10. The Xperia 10 is also the first device to come with user data encryption enabled by default, and with SELinux, Security-Enhanced Linux, access control framework enabled. We'll be rolling out SELinux policies in phases. For now Torronsuo introduces SELinux policies for display control (MCE), device startup and background services (systemd), and more will follow in upcoming releases. We have a few details of the Xperia 10 support to finalise, and will announce Sailfish X for the Sony Xperia 10 within the upcoming weeks.

Torrnsuo National Park is in the Tavastia Proper region of Finland. This park is valuable for its birdlife and butterfly species. Roughly a hundred species nest in the area. Part of the birds and insects are species that typically live in the northern areas, and they aren't seen much elsewhere in southern Finland.
