Sure, there's a chance you could turn your old smartphone into a pocket-sized Linux computer by replacing the operating system. But if you're looking for a purpose-built device with a touchscreen display, a QWERTY keyboard, and features you won't typically find on phones (like 4 USB ports), the folks at Popcorn Computer have you covered.

Maybe. The team has unveiled plans to launch a new pocket-sized computer, appropriately called the Pocket P.C.

It's set to go up for pre-order through a crowdfunding campaign beginning November 24th. Prices will start at \$199 (or \$249 for a model with a LoRa radio). And if everything goes according to plan, it could ship by May 1st, 2020.
