Following the decision by Debian Project Leader Sam Hartman to seek a general resolution over init system diversity and just how much Debian developers care about supporting systemd alternatives, the general resolution vote is moving closer.

The text is now laid out over three proposals drafted by Sam Hartman in weighing the importance of systemd / init system diversity by Debian developers.

The three choices include affirming init diversity, focusing on systemd but supporting the exploration of alternatives, and focusing on systemd for the init system and other facilities.
