- [Redis Labs eases database management with RedisInsight](#) [2]

The robust market of tools to help users of the Redis database manage their systems just got a new entrant.

Redis Labs disclosed the availability of its RedisInsight tool, a graphical user interface (GUI) for database management and operations.

Redis is a popular open source NoSQL database that is also increasingly being used in cloud-native Kubernetes deployments as users move workloads to the cloud. Open source database use is growing quickly according to recent reports as the need for flexible, open systems to meet different needs has become a common requirement.

Among the challenges often associated with databases of any type is ease of management, which Redis is trying to address with RedisInsight.

- [WordPress 5.2.4 Update](#) [3]

Late-breaking news on the 5.2.4 short-cycle security release that landed October 14. When we released the news post, I inadvertently missed giving props to Simon Scannell of RIPS Technologies for finding and disclosing an issue where path traversal can lead to remote code execution.

Simon has done a great deal of work on the WordPress project, and failing to mention his contributions is a huge oversight on our end.

Thank you to all of the reporters for privately disclosing vulnerabilities, which gave us time to

fix them before WordPress sites could be attacked.
