Shenzhen Xunlong has posted preliminary specs for a Rockchip RK3399 based ?Orange Pi 4? SBC that is smaller and more affordable than the Orange Pi RK3399 and faster and more feature rich than the Orange Pi 3. A 4B variant adds a Lightspeur 2801S AI chip.

New Orange Pi boards usually just show up unannounced on AliExpress, but for the fourth iteration of its flagship Orange Pi board, Shenzhen Xunlong teased some detail views on Twitter. The Orange Pi 4 and an AI-enhanced Orange Pi 4B will ship in two weeks. Pricing is undisclosed, but the boards will be ?cheaper? than the previous Rockchip RK3399-based Orange Pi, the Orange Pi RK3399. That larger SBC debuted at \$109 and now sells for \$89 with 2GB DDR3 and 16GB eMMC compared to 4GB LPDDR4 and 16GB eMMC for the Orange Pi 4.
