Released at the end of October to little fanfare was webOS Open Source Edition 2.0, the open-source Linux OS currently in development by LG for use on their Smart TVs and other digital products. With webOS Open Source Edition 2.0, they began setting their sights on automobiles and other potential use-cases. That was then extended by this week's release of webOS OSE 2.1.

WebOS Open Source Edition is the open-source spin of this Linux OS that has been controlled by LG Electronics now for the past number of years. This is the operating system formerly developed at Palm a decade ago already before being acquired by HP. The initial webOS Open-Source Edition came last year while this second installment arrived at the end of October.
